

HR SOLUTIONS PRESENTS

EMPLOYEE SATISFACTION HEALTHCARE NORMATIVE DATABASE

HR Solutions has recently developed a new Employee Satisfaction Normative Database by hospital departments, which revealed some real departmental surprises and very interesting benchmarks.

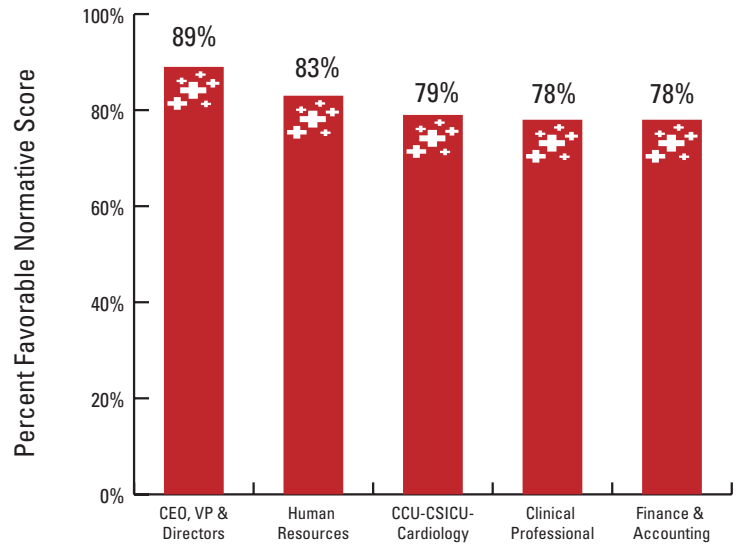

With this data, we can now identify which departments within healthcare organizations exhibit the lowest or highest Overall Job Satisfaction. To put this data into some perspective, the highest of these departments (CEO, VP & Directors) displays 27 percentage points more job satisfaction than the lowest-scoring department Critical Intensive Care!

This new normative data now provides healthcare organizations with a better external benchmark to gauge their organizations' employee satisfaction on departments within their organization.

The National Normative Healthcare research included roughly 475,000 employees in the Healthcare Industry all surveyed within the last three years by HR Solutions.
